

ENERGY POLICY

At CC7, we are committed to responsible energy management and the continuous improvement of energy performance across all our Engineering, Procurement, and Construction (EPC) operations. We recognize that efficient energy use is essential to reducing environmental impact, enhancing sustainability, and delivering value to our clients and stakeholders.

Our objective is to optimize energy consumption, reduce greenhouse gas emissions, and support the transition to a low-carbon economy while maintaining operational excellence.

To achieve this, we shall:

- **Comply** with all applicable legal and regulatory requirements related to energy use, energy efficiency, and energy consumption.
- **Establish, implement, and maintain** an Energy Management System (EnMS) in accordance with ISO 50001, integrated within our overall business management system.
- **Identify significant energy uses (SEUs)** within our operations and set measurable objectives and targets to improve energy efficiency and performance.
- **Promote energy-efficient design, procurement, and construction practices** that reduce the lifecycle energy footprint of our projects.
- **Integrate energy performance considerations** into decision-making processes related to planning, project execution, and procurement.
- **Enhance awareness, skills, and engagement** of employees and contractors through energy efficiency training, communication, and competency programs.
- **Monitor, measure, and review** energy consumption and performance using reliable data and indicators, ensuring accountability at all levels.
- **Promote the use of renewable energy sources** and low-emission technologies where feasible and beneficial to project objectives.
- **Collaborate with clients, partners, and suppliers** to promote energy-efficient solutions and drive innovation in energy management.
- **Continually improve** our energy management system, performance, and practices through audits, reviews, and feedback mechanisms.

This Energy Policy is communicated to all employees, contractors, and relevant stakeholders. It is reviewed periodically to ensure ongoing relevance, alignment with our business strategy, and effectiveness in promoting energy sustainability.
